Building manager
[Person]
Watches the dashboard; chooses which rooms are controlled

views dashboard [HTTP]
selects rooms [rooms.json]

Room Climate Control
[Software System]
Simulates room physics; decides heating and ventilation for every controlled room

views 3D building [HTTP + WebSocket]

Occupants
[Person, simulated]
Their heat and CO_2 load the rooms

are modelled by

reads clock + head-counts [REST]

Occupancy simulator
[Software System, course-provided]
Moves people; owns the simulated clock

registers devices; writes sensor values; reads and writes actuator state [REST]

positions + room occupancy [REST]

BuildSim
[Software System, course-provided]
Building model, device registry, 3D viewer
